

FARUK HASAN

Senior QA Engineer | AI Product Development, LLM Evaluation & Automation Strategy

Long Island, New York | Email: fhasan.mohammad@gmail.com | Mobile: (631) 480-7466
[LinkedIn](#) | Portfolio: <https://faruk-hasan.com/> | [Github](#)

PROFESSIONAL SUMMARY

Technical product-minded QA leader with 6+ years building and improving enterprise software quality, AI-assisted workflows, and automation platforms. Combines hands-on experience with LLM evaluation, Playwright/Python development, requirements analysis, and educator-led AI product creation for 2,000+ learners. Skilled at translating user needs into testable requirements, measurable outcomes, and reliable releases.

TECHNICAL EXPERTISE

Test Automation: Playwright (TypeScript/Python), Selenium (Java/Python), Appium, Pytest, TestNG, JUnit, Cucumber

API & Performance: Postman, REST API Testing, JMeter

AI & LLM Testing: LLM Validation, Prompt Engineering, AI-Assisted Test Automation, Claude, OpenAI API, Amazon Bedrock, GitHub Copilot, ZeroStepAI, MCP, Playwright MCP

CI/CD & Cloud: TeamCity, Jenkins, GitHub Actions, AWS (EC2, S3), Docker, Git/GitHub

Programming & Databases: TypeScript/JavaScript, Python, Java, SQL, MySQL, MongoDB

Test Management & Tools: Jira, Zephyr, TestRail, Allure, Grafana

PROFESSIONAL EXPERIENCE

[Digital.ai](#), Remote

September 2022 – Present

Role: Senior Software QA Engineer

Key Contributions and Achievements:

- **Quality Strategy & Automation Architecture:** Develop and maintain a scalable Playwright/TypeScript quality platform supporting 300+ automated tests. Partner with engineering and product teams to translate critical user workflows and acceptance criteria into reusable fixtures, Page Object Models, API-driven test setup, authentication/session management, and data-driven testing—expanding automation coverage from 40% to 50%.

- **Delivery Efficiency & Quality Metrics:** Reduced UI regression execution time by 50% through parallel execution and cross-browser testing, enabling faster CI feedback, earlier defect detection, and more reliable releases.
- **AI & LLM Quality Engineering:** Evaluate AI-powered features and LLM outputs through prompt testing, response validation, edge-case analysis, and AI-assisted automation using Claude, GitHub Copilot, ZeroStepAI, and Python.
- **CI/CD & Release Enablement:** Build and maintain automated testing workflows in TeamCity and Jenkins, using shell scripting and AWS to support continuous testing, release readiness, and dependable delivery.
- **Production Quality & Root-Cause Analysis:** Investigate production issues and turn findings into targeted automated coverage using Playwright, Python, and JMeter to reproduce defects, validate fixes, and reduce repeat regressions.
- **Technical Leadership & Cross-Functional Collaboration:** Share Playwright, automation, and emerging AI-testing practices with the QE Guild; mentor interns and junior engineers on framework design, quality engineering practices, and effective test strategy.

M.M. Hayes, Co., Inc. NY

Role: Software Test Engineer

Responsibilities & Impact:

March 2020 – August 2022

- **Automation Framework & Business Workflow Coverage:** Developed and maintained a scalable Selenium WebDriver framework using Java and TestNG, creating reusable components and automated regression coverage for critical business workflows.
- **Regression Efficiency & Release Readiness:** Improved regression efficiency through parallel execution, cross-browser testing, and optimized test selection, enabling faster release validation and feedback.
- **Backend & Data Validation:** Implemented SQL-based backend validation to verify application data, business rules, and end-to-end transaction integrity across integrated systems.
- **Requirements Traceability & Stakeholder Alignment:** Migrated and organized test cases in Jira and established Requirements Traceability Matrices (RTMs), improving requirement coverage, defect tracking, test reporting, and alignment between business needs and delivery.
- **Mobile Product Quality:** Developed and executed automated mobile tests using Appium and Java, validating critical user workflows and cross-platform behavior across mobile applications.
- **POS & Desktop Application Quality:** Designed and executed automated and manual tests for Point-of-Sale and desktop applications, validating end-to-end workflows, integrations, and business-critical functionality.
- **Technical Leadership & Mentorship:** Mentored junior engineers on Selenium, Java, test

automation, and QA best practices while contributing to test strategy, regression planning, and cross-functional quality initiatives.

AI & AUTOMATION PROJECTS

AI Learning Products & Machine Learning Course | Udemy

Designed and launched a 9+ hour hands-on AI/ML learning product covering Python, NLP, Scikit-learn, Naive Bayes, data preparation, and development of a machine-learning chatbot. Translated complex AI concepts into practical, learner-centered projects.

View Course:

<https://www.udemy.com/course/ai-machine-learning-for-beginners-build-a-python-chatbot/>

Playwright Test Results Extension | GitHub

Built a JavaScript Chrome extension that turns raw Playwright test output into an accessible real-time results experience, helping developers quickly inspect test status and failures.

GitHub: https://github.com/faruklmu17/playwright_test_result

Playwright Python Framework | GitHub

Created a reusable Playwright/Python test-automation framework with Pytest, fixtures, session handling, data-driven execution, and GitHub Actions CI/CD—designed to make reliable browser testing easier to adopt and maintain.

EDUCATION

Masters of Science in Electrical Engineering

(Graduated: 2016)

Loyola Marymount University

Bachelor of Science in Electrical Engineering

(Graduated: 2011)

Queen Mary, University of London
